

Amendments to the Drawings

FIGS. 23A and 23B have been amended as shown in the attached "Replacement Sheet" and "Annotated Sheet Showing Changes."

These drawings have been amended to clarify the border portion between the bottom and side surface of the storage electrode. The amendments are based on the SEM image of FIGS. 23A and 23B, and these amendments do not introduce new matter.

As described in lines 1-5 of page 39 of the present specification, the edge of the storage electrode shown in FIG. 23A is rounded and thickened in a substantially spherical and thickened configuration as shown in FIG. 23B. Also described in the specification and shown by the original SEM images of FIGS. 23A and 23B, the border between the bottom and the side surface is also rounded.
